

A close-up photograph of a person's hand holding a white, cylindrical Vexoderm dressing over a dog's paw. The dog is a medium-sized breed with brown and black fur, looking towards the camera with its tongue out. The background is a plain, light color.

**Vexoderm**

**NEW DRESSING  
FOR MOIST WOUND CARE**

# Vexoderm

## What is Vexoderm?

Vexoderm is a new generation wound dressing that cleanses and detoxifies the wound bed.

Its innovative design is the result of years of research on oxidative stress.

## Why moist wound care?

With moist wound care great conditions are obtained in the wound bed for proper evolution of the wound (temperature, humidity and protection).

Thanks to its design, in addition to the benefits of moist wound care, Vexoderm also manages the exudate and reduces the excess of free oxygen radicals present in the exudate.

## Components

Vexoderm combines 2 components that give the wound dressing some unique features:

- 1 Lyophilised 100% vegetal matrix with high absorption capacity
- 2 Hydration solution with moisturising and antioxidant properties

# New dressing for moist wound care

## What are the benefits of Vexoderm?

Vexoderm works on many types of wounds and helps in all phases of wound healing.

- Stimulates the natural elimination of necrotic tissue.
- Favours the formation of healthy granulation tissue.
- Helps obtaining good quality epithelial tissue.

## Our superior advantage

**Only one change every 7 days**

## How is Vexoderm used?

- Effective on most types of wounds: polytraumas (cuts, abrasions, burns), bites, necrosis, ulcers, surgical wounds, and wound dehiscence.
- Adaptable for use on many wound areas.
- Very easy to use:
  1. Hydrate the matrix with the solution
  2. Place Vexoderm over the wound
  3. Add a secondary dressing
  4. Cover with a protective bandage
